Polycarbonate Upholstery Textiles

Care and Cleaning Instructions

W-S: Clean with a waterbased or solvent-based cleaning agent

REGULAR MAINTENANCE

This polyurethane upholstery textile is engineered with the highest quality polycarbonate resins that offers exceptional cleanability. As with any polyurethane textile, it is important to vacuum regularly, using a soft brush attachment, to remove loose dirt and surface dust, including in creases and folds where dust buildup tends to stay hidden. General soiling can be removed with mild soap and water. The use of conditioners or protectants is not required or recommended. Periodically, a professional cleaner should thoroughly clean the upholstery to remove the soiling that a normal vacuum cleaner cannot reach.

SPOT CLEANING

General soiling can be removed with mild soap and water. Follow with a rinse of fresh water and wipe dry with a clean, lint-free cloth. Ink marks from a ballpoint pen can be dry-erased by rubbing the area with a clean, lint-free cloth. Tough food stains like ketchup and yellow mustard, and topical antiseptics and lotions that would stain conventional polyurethane upholstery can be easily removed.

STAIN REMOVAL

The key to removing waterbased or oil-based stains is prompt action. Recommended cleaning for different types of stains are listed below.

- For food stains such as ketchup, chocolate, coffee/tea, or salad dressing, wipe affected area with a soft cloth or sponge. If some stain persists, clean with mild soap and water, then rinse with fresh water and wipe dry. For more difficult stains, wipe with a 70% dilution of isopropyl alcohol and water, then wipe dry.
- For healthcare stains such as blood, urine, or Betadine®, wipe affected area with a soft cloth or sponge. If some stain persists, clean with mild soap and water, then rinse with fresh water and wipe dry. To disinfect: wipe the material with a 20% solution of household bleach and water. Make sure to rinse the cleaned area with fresh water and dry with a soft, lint-free cloth.
- For ink or permanent marker, rub affected area vigorously with a clean, lint-free cloth and firm pressure. If some stain persists, apply a small amount of isopropyl alcohol to a clean cloth and rub the stain until it is removed. Then rinse with fresh water and wipe dry. Note: Removal of ink, particularly permanent marker, may vary depending on how long the ink has set in. Therefore, full removal is not guaranteed.
