

Textile Treatments

Sunbrella® Upholstery Textiles

The following treatments are available for Sunbrella woven upholstery textiles to enhance performance for commercial use. Please note: In order to yield a specific yardage, an additional two yards must be ordered to allow for working loss during the production process. Application of these treatments can add two to three weeks to the delivery time.

Note: Sunbrella upholstery textiles are already treated with a stain resistant finish.

ACRYLIC BACKING

Because of the fabric construction, Sunbrella fabrics do not require a backing in order to pass ACT performance standards. However, if a furniture manufacturer requires, unbacked Sunbrella textiles can be finished with an acrylic backing. Please inquire with Customer Service about minimum order quantity, cost and lead time.

MOISTURE BARRIER

For upholstery projects requiring protection from liquid penetration, such as seating used in hospitals, corporate cafeterias, and hotel public spaces, a moisture barrier can be added to Sunbrella fabrics. This state-of-the-art, breathable liquid barrier safeguards cushions, fabric, and furniture, and can be formulated with or without a flame retardant. Please inquire with Customer Service about minimum order quantity, cost and lead time.
